Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-25 (Canceled).

26. (Currently Amended) A method as recited in claim 27 ~~[[24]]~~, wherein the operational condition indicates at least that the wireless communication circuitry is operating on an incoming call.

27. (Currently Amended) A method ~~as recited in claim 24~~ for operating a pair of eyeglasses having wireless communication circuitry and an operation indicator, said method comprising:

monitoring the wireless communication circuitry to determine an operational condition of the wireless communication circuitry; and

controlling the operation indicator based on the operational condition of the wireless communication circuitry as determined by said monitoring,

wherein the operational condition indicates at least whether the wireless communication circuitry is in use,

wherein the eyeglasses further couples to at least one sensor,

wherein said method further comprises receiving sensor information from the at least one sensor, the sensor providing sensor information that pertains to a physical condition of the user, and

wherein said controlling operates to control the operation indicator based on the sensor information and based on the operational condition of the wireless communication circuitry.

PATENT

28. (Currently Amended) A method as recited in claim 27 ~~[[24]]~~, wherein the operation indicator is a light source.
29. (Cancelled).
30. (Cancelled).
31. (Cancelled).
32. (Previously Presented) A method as recited in claim 27, wherein the at least one sensor is internal to said eyeglasses.
33. (Previously Presented) A method as recited in claim 27, wherein the at least one sensor is attached to said eyeglasses.
34. (Previously Presented) A method as recited in claim 27, wherein the at least one sensor is remote from said eyeglasses, and wherein the sensor information from the sensor is wirelessly supplied to said eyeglasses.
35. (Currently Amended) A method as recited in claim ~~24~~ for operating a pair of eyeglasses having wireless communication circuitry and an operation indicator, said method comprising:
- monitoring the wireless communication circuitry to determine an operational condition of the wireless communication circuitry; and
- controlling the operation indicator based on the operational condition of the wireless communication circuitry as determined by said monitoring.

PATENT

wherein the operational condition indicates at least whether the wireless communication circuitry is in use,

wherein the eyeglasses further operatively couple to at least one sensor,

wherein said method further comprises receiving sensor information from the at least one sensor, the sensor providing sensor information that pertains to a mood of the user, and

wherein said controlling operates to control the operation indicator based on the sensor information and based on the operational condition of the wireless communication circuitry.

36. (Previously Presented) A method as recited in claim 35, wherein the at least one sensor is internal to said eyeglasses.

37. (Previously Presented) A method as recited in claim 35, wherein the at least one sensor is attached to said eyeglasses.

38. (Previously Presented) A method as recited in claim 35, wherein the at least one sensor is remote from said eyeglasses, and wherein the sensor information from the sensor is wirelessly supplied to said eyeglasses.
